

# Here for a second dose?

Your first dose must have been at least eight weeks ago

You must be over 18 to receive the vaccine

Your second dose should be the same as your first (Pfizer, AZ or Moderna) - check this session is right for you

**You must not be in a period of isolation or quarantine**

Vaccine doses are more effective when they are given at least eight weeks apart.

So to give you the best possible protection from COVID-19, if you received your first dose less than eight weeks ago, you will need to come back at a later date.
